The Stalemated Seventies
1968 – 1980
Stagnation in the 1970s

• 1945 – 1970 – 25 years of economic growth
  – Productivity had increased; US workers doubled their standard of living

• 1970s – no productivity gains (over entire decade) equal to 1 year in 25 previous years

• 1970 – 1990 – median family income stagnated
  – Failed to decline only because working women added wages to family income
  – For first time in US history, rising generation faced prospect of living standard lower than their parents
Median Family Income, 1970 – 2000
Sources of Stagnation

- Causes of slump in productivity are debated
  - Women and teenagers in workforce
    - Had fewer skills; less likely to take long-term work to develop skills
  - Declining investment in new machinery
  - Government regulation
  - Shift in economy from manufacturing to service (harder to increase productivity)
Sources of Stagnation

• Other problems in the economy
  – Vietnam War
    • Drained money from needed improvements at home
  – Inflation: increase in price levels – too many dollars chasing too few goods
    • Root cause was Johnson’s increased spending in 1960s
      – Vietnam War and Great Society programs
      – Did not increase taxes to offset spending increases
      – Inflationary because they give dollars to people without increasing supply of goods they can buy
  • Increase in oil prices in 1970s made inflation worse
Sources of Stagnation

• Foreign competition
  – US companies had little competition after WWII
    • Little incentive to modernize or become more efficient
  – German and Japanese companies rebuilt new factories with most modern technology and management techniques
  – 1970s – dominated important industries US companies once had (steel, automobiles, consumer electronics)
Why Detroit's engineers are secretly praising Volkswagen's Rabbit.

One thing about the men of the engineering profession they give credit where credit is due. Which may explain all the nice letters and phone calls we've received from Detroit since our new Rabbit has been out. Why all the praise?

93 miles per hour.
A Rabbit is very fast. And although we obviously don't recommend 93 mph (please obey all speed limits), it is reassuring to know you're about to get onto a highway expressway, that a Rabbit has the power for great acceleration. From 0 to 50 in only 8.2 seconds. That's quicker than a Wagon 2+2.

38 miles per gallon.
A Rabbit is very thrifty. In the recent 1975-model Federal Environmental Protection Agency's fuel economy tests, the Rabbit averaged 38 miles to the gallon on the highway. It averaged a sly 24 in tougher city traffic.

As big inside as some mid-size cars.
The Rabbit is a subcompact-sized car. That's on the outside. Open the door and it's a different story. 80% of the space in the car is devoted to functional room. There's actually the head and leg room of some mid-size cars.

You get this feeling of roominess immediately, as you stretch behind the wheel and look out through the huge front windshield. Visibility is incredible.

The Rabbit comes only one way, as a Hatchback. And you don't pay a penny more for that extra door. In addition to the 4-door model shown, there is a 3-door available. Four doors plus a Hatchback. That's a lot of ins and outs in one car.

How we got it to handle so easily.
The best way to describe driving a Rabbit is that it just feels right. The rack-and-pinion steering, designed exclusively for the Rabbit, allows you to feel in complete control, especially on fast, tight turns.

Another VW exclusive, an independent stabilizer rear axle, means independent wheel travel for more riding comfort and added safety on rough roads.

As it true of only two Detroit cars, the Eldorado and Toronado, the Rabbit has front-wheel drive for road-hugging stability. The firm and sporty ride of the car is enhanced by rigid unibody chassis construction, controlled spring and shock rates and longer suspension travel.

Owner's Security Blanket.
To make sure your Rabbit lives a lively and a carefree life, it's backed by the most advanced car coverage plan in the automotive industry. The Volkswagen Owner's Security Blanket with exclusive Computer Analysis.

The car of the future.
Lately, a lot of automotive executives have been giving speeches on 'the car of the future.' They see it as being small, low-priced, but with increased interior dimensions and more economical performance. Gasoline-guzzlers of the automotive industry, your car of the future, our Rabbit, is here today.

And it won't cost you much to try it out. Happy days are here again.

  – First proposed by feminists in 1923

• Antifeminists blamed women’s movement for rising divorce rate
• Religious Protestants and Catholics organized to oppose right to abortion
Feminist Victories and Defeats

• ERA defeat was feminists’ most bitter defeat
  – Needed 38 states to be ratified
  – Conservative Phyllis Schlafly led campaign against ERA
    • ERA supporters were just “bitter women seeking a constitutional cure for their personal problems”
    • ERA would lead to vast expansion of federal power, drafting of women into military, taxpayer-funded abortions, and same-sex marriages
  – 1979 – Congress extended deadline for ratification (initially 7 years, extended 3 more)
  – 1982 – ERA died, 3 states short of 38 needed

  – Allan Bakke sued because his admissions to medical school was denied in favor of a minority
  – Court ruled that Bakke must be admitted and that preferences in admissions could not be made based on ethnicity or race alone (quotas)
    • However, race could be used as part of a school’s overall admissions policy to assemble a diverse student body
  – Thurgood Marshall vigorously dissented
    • Denial of racial preferences might erase years of progress
  – Conservatives applauded the decision as a win against affirmative action
